

# ASSEMBLY & USE GUIDE

## CONVEX, MIRROR WIDE-ANGLE VIEW

PAGE 1 of 2

# THANK YOU !!!

Help others by leaving your honest review on Amazon.

Picture & Videos are a great help also!

Use the bracket as a hole template BEFORE installing the mirror:

- 1) Mark hole locations
- 2) Drill pilot holes
- 3) Attach the bracket
- 4) Mount the mirror

See below for appropriate screws and recommended drill sizes.

**Installing mirror onto bracket**

- 1) Washer
- 2) Bracket
- 3) Lock Washer
- 4) Nut Tighten

NOTE: The three Phillips #3 (PH 3) screws on the back around the mirror post can be used to tighten the ball pivot joint

AFTER using a masonry bit to drill the holes into concrete, brick or block:

- 1) Clean the holes of residual debris.
- 2) With the nuts and washers still in place, slide or tap the fastener into the hole (SEE NOTE). →
- 3) Before attaching the bracket, first install the flat washer (only) and the nut. Tighten to secure the fastener in the hole.
- 4) Now, remove the nut from each fastener (leaving the flat washer in place. Install the bracket, the lock (split) washers and the nuts. Tighten securely.

NOTE: If tapping into the hole with a hammer, back the nut out to cover the screw to protect it. Tap on the nut (not the screw itself).
